Letter of Intent:

Future Sustainable Leisure in cabin municipalities reconciled With healthy Ecosystems

Åfjord kommune confirms their participation in the proposed project as partner «FUSE: Future Sustainable leisure in cabin municipalities reconciled with healthy Ecosystems». This project provides interdisciplinary knowledge and new cross-sectoral solutions for a sustainable future for cabin communities, with emphasis on a healthy ecosystem approach explored through opportunities for cultural change, architectural and business model solutions.

The project is of interest to Åfjord municipality on cabin building of the future in the context of tourism. Åfjord Municipality has unanimously adopted a master plan for tourism where the principles for sustainable future buildings (including areas) are contained.

Åfjord Kommune will support projects by providing access to local stakeholders who are important in developing new concepts for sustainable leisure, which is an area under pressure. We will provide additional knowledge to the project based on our own expertise in investigating these areas, as well as participate in relevant meetings and workshops. We will also provide space for research to sit during long period of data collection.

Kind regards

Per O. Johansen
Rådmann
